

An E.J. Ward, Inc. Company

Elevate Your Process

We make managing your fleet simply accurate,
simply automated, and simply secure

Celebrating 50 years!

Single platform solutions to monitor and maintain the health of your fleet

SimplyFuel Solutions manages gasoline, diesel, bio-diesel, ethanol, hydrogen, and EV chargers in single-fuel and multi-fuel vehicles

Fuel View™ software for centralized site management and total control

User-friendly, browser-based interface monitors key performance indicators and provides customizable security features.

- Automate access to fueling and accounts
- Absolute certainty every drop of fuel goes into the identified vehicle
- Faster, more accurate fleet analysis
- Decrease response time with customizable alerts and alarms for fuel transactions, vehicle usage, and storage tank levels

SaaS Solution

Working in the cloud maximizes value and ensures dependable performance in a secure, hassle-free environment.

- Multiple layers of security
- Virtual environment in a dedicated database
- No down-time, redundant back up, and disaster recovery

 Download our SaaS brochure at ejward.com/solutions/software-as-a-service/ or contact Ward for more information.

Powerful reports that provide value

Business-intelligence based reporting is user-defined and highly flexible. Data visualization tools help to present a wealth of information for every fuel transaction and recordable event within your fleet.

- Data rich At-A-Glance dashboards
- Manage critical information in a customizable environment
- Interface and export to billing and accounting systems

Detect and Deter Fuel Theft

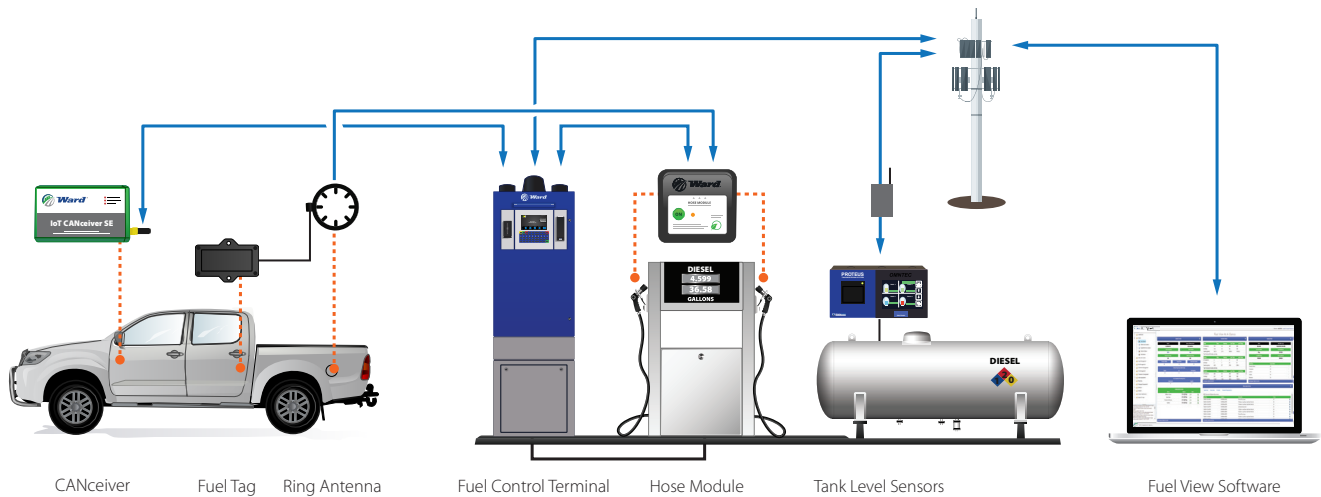

With Fuel View's customizable key performance indicators and alarm triggers, you will have the most accurate real-time fuel usage monitoring available, uncovering anomalies that can cost thousands of dollars.

Scalability for fleets of any size and growth

Manage a few or hundreds of thousands of sites, tanks, pumps, vehicles, assets, and employees.

- Modular design - easily add features
- Future-ready for technology advancements
- Multi-user architecture

Measurable results and lower operating costs from storage tanks to vehicle tanks and beyond

Absolute certainty every drop of fuel goes into the identified vehicle

Ward's technology lets you enjoy every benefit of controlled fueling systems with greater accuracy and accountability for every transaction.

- 100% secure access
- Positive vehicle and driver identification
- Control fueling frequency, quantity, and types
- Automate transaction records

Automated fuel access and telematics

Fully automates fueling access, vehicle tracking, and driver performance monitoring with one simple to install interface.

- Record diagnostic and driver behavior events
- Access every byte of information your fleet generates
- Reduce fuel island time

IoT Fuel Control Terminal provides real-time control and remote authorization

Proven performance and error free accounting allows drivers to gas & go.

- REST based API for absolute real-time fuel island communication and remote control
- Standard and custom integration with fleet maintenance applications
- Control access to multiple fuels, fluids, and EV chargers

Remote fuel truck version ensures your fleet has fuel in remote locations

Every system is thoroughly quality control tested in our factory and rechecked after installation.

- Rugged industrial grade construction for long life
- Dependable operation in extreme weather
- Impervious to all standard motor fuels and most common solvents

Long-range RFID UHF reader options

Barcode and reader for transit lane and fueling access

Ideal for applications in demanding environments that require only a vehicle ID for fuel access

- Tamper resistant windshield tags
- Heavy-duty, high-speed and passive versions
- Fast data-rate communication, password data protection for precise, reliable reading

TagMaster
North America, Inc.

EV charger solutions with revenue generating options

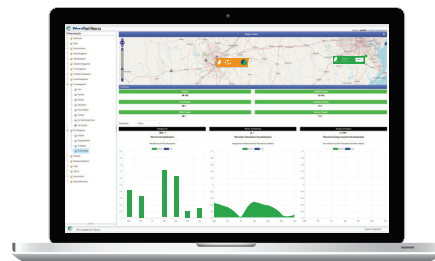

SimplyFuel Solutions®

EV chargers to meet government mandates and compliance

Fully integrated with Fuel View software for controlling access to fleet vehicles and tracking usage.

- Level 3 DC Fast and Level 2 chargers
- Charge in as little as 10-15 minutes
- Single or dual charging ports without any loss of charge speed
- Space saving wall mount versions for lower installation cost
- Pedestal mount for open parking lots
- NEVI Compliant fast chargers

Fuel tank management - above and below ground

Tank gauging, monitoring and leak detection, and quality control

The flexibility of the PROTEUS Series makes it ideal for a variety of applications and is fully integrated with Fuel View*.

- Simultaneously monitor product levels, water levels, temperature, and leaks in multiple tanks
- Ability to identify itself and its location with alarm conditions
- Above and below ground tanks
- Low installation cost

* Ward Fuel View software also integrates with other tank monitoring systems.

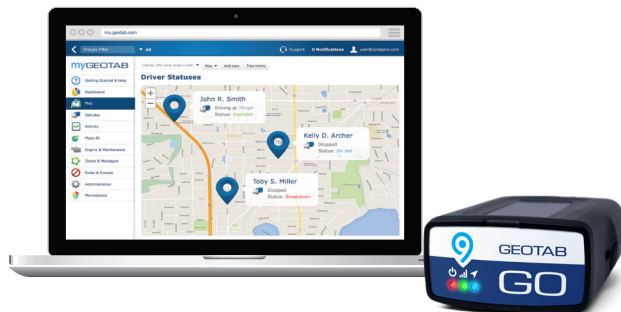

GPS solutions provide the best choices for your fleet

Cloud Connect and Gateway deliver opportunities to improve your bottom line

Analyze performance to uncover improvements and cost reduction opportunities.

Gain real-time visibility into operations and driver behavior, while increasing driver satisfaction, decreasing fuel consumption, and idling through predictive analytics and accurate reporting.

MyGeotab is an open platform for safe, sustainable and cost-effective mobility

Manage your entire fleet from one open platform with Geotab's fleet management and tracking system.

Unlock actionable insights and recommendations to boost fleet efficiency, safety and sustainability powered by AI and data intelligence.

We developed options that integrate fuel management, GPS and telematics

For use with Samsara, Geotab and other third party providers

The Ward - Go Fuel - Interface® device is a reliable solution to record odometer validation and OBDII data sharing between third party GPS and telematics platforms and Ward's Fuel Management System.

Our experts helping your experts

World class implementation

Ward's responsive Project Management team members work closely with your team to fulfill scope, schedule, and budget requirements in a timely and professional manner, ensuring all phases of your project operate smoothly.

Custom engineering to meet your unique needs

Our R&D Engineering team is continuously creating new and optional extensions to our suite of solutions. If you don't see a feature you need, ask a Ward Sales Representative about our custom development and engineering services.

We are customer driven!

Customer satisfaction ensured

Since 1974, E.J. Ward has designed and engineered proven solutions, ensuring complete fuel management for fleets of any size. As a pioneer in the fuel management industry, we maintain a commitment to process improvements - keeping our products aligned with technology advancements for the most dependable security and quality.

Markets served

Versatile, comprehensive tools provide customized, secure, and automated fueling control applications for fleet operators in all markets - including Government entities, Airports, Utilities, Terminals & Ports, Industrial, Transit, Delivery & Distribution and more.
